[4] AI Chip Design Centre, Japan

❖ **FOCUS**. Computing constitutes a fundamental component of the emerging Society 5.0, which combines cyber and physical spaces (i.e., processes) and requires control and monitoring techniques for its operation and management. In Society 5.0, people, things, and systems are connected in cyberspace and operate exploiting automated methods, including machine learning (ML) and artificial intelligence (AI). Such operation and management bring new value to industry and society in ways not previously possible. Typical cyber physical systems (CPS) are based on (I)IoT (Industrial - Internet of Things) and (I)CPS (Industrial - Cyber Physical Systems) and have applications in all critical infrastructure domains with strict real-time requirements, such as healthcare, electric grid, transportation, to name a few. Intentional or accidental errors/failures/attacks to these systems have highly severe consequences. Therefore, novel design methodologies are required to ensure that design of real-time cyber physical systems and applications in the emerging Society 5.0 are free of vulnerabilities, threats and attacks. Since the physical part of CPS involves several processes, typically, it is challenging to ensure that the design is free from all known vulnerabilities. It is necessary to develop run-time monitoring and analysis techniques that can help to detect run-time incidents by observing the processes and their data. Furthermore, adequate modelling of CPS physical processes and corresponding cyber and physical attacks is fundamental to systematically model, analyse and verify real-time security of CPS. Importantly, since AI and machine learning have demonstrated their success in many application areas including cyber security, this special session focuses on investigating AI, machine learning and formal methods-based techniques to develop safe, secure, privacy and law-aware real-time cyber physical systems, digital twins and smart cities at all levels, from hardware components to applications.

❖ **TOPICS.** Topics of interest include, but are not limited to:
  ❖ Design-time and run-time safety, security, privacy and law in modern systems, e.g., Society 5.0, Digital Twins, ICPS, and IIoT.
  ❖ Data-driven (AI and Machine Learning-based)/model-based
      ❖ Safety, security, privacy and law in cyber-physical systems (CPS), networks and communication
      ❖ Prevention, detection and mitigation techniques for real-time CPS (RT-CPS) applications against cyber and physical threats
      ❖ Hardware design for safe, secure, privacy and law-aware RT-CPS
      ❖ Vulnerability analysis of RT-CPS applications
      ❖ Attack modeling and performance analysis of RT-CPS
  ❖ Formal methods (FM)-based safety and security of critical systems at design-time and run-time
  ❖ Safety, security and privacy of citizens in Society 5.0 including pandemics and disasters
  ❖ Methodologies and tools for analysis, compliance and enforcement of law and regulations for safety, security and/or privacy
  ❖ Methodologies and tools for compliance testing and standardization
  ❖ CAD tools for AI-based cyber-physical systems (CPS)
  ❖ CAD tools for safe, secure, privacy, and law-aware RT-CPS
  ❖ Case studies for AI and machine learning-based RT-CPS
  ❖ Case studies for digital law compliance and regulations in RT-CPS
  ❖ Benchmarks for security, safety, privacy and or/law in RT-CPS
  ❖ Challenges in modelling, analysis, safety, security, privacy and law of RT-CPS

❖ **AIM**. The aim of the Special Session is to bring together security, safety, privacy and law researchers and practitioners from the industry and academia and provide them with a platform to report on recent advances and developments in the newly emerging areas of Society 5.0 (i.e., their underlying infrastructure that includes modern IIoT and ICPS), their design-time and run-time safety, security and privacy employing AI, ML and FM based techniques.

❖ **CONFERENCE FORMAT**. The conference will comprise multi-track sessions for regular papers, to present significant and novel research results with a prospect for a tangible impact on the research area and potential implementations, as well as work-in-progress (WiP) and industry practice sessions.

❖ **AUTHOR'S SCHEDULE (2023)**

❖Regular and special sessions papers
Submission deadline	March 31
Acceptance notification	May 5
Deadline for final manuscripts	June 16

❖Work-in-progress/Industry practice papers
Submission deadline	May 12
Acceptance notification	June 9
Deadline for final manuscripts	June 16
